

Sustainability Report 2025

This report summarises the environmental performance of Veloria Mobility in Arvenna for the calendar year 2025.

Lifecycle emissions

Lifecycle emissions fell to 38 g CO₂e per passenger-km in 2025, down from 52 g CO₂e per passenger-km in 2023. The figure covers vehicle manufacturing, charging, operations and end-of-life treatment.

Our target for 2030 is 25 g CO₂e per passenger-km.

Energy

Since July 2024 all electricity used for charging comes from renewable sources through a power purchase agreement with the Kestrel Ridge wind farm.

Vehicle and battery lifetime

Veloria S3 scooters now last 4.5 years on average, and Veloria B2 e-bikes last 6 years on average.

Retired battery packs are recycled by our partner ReCell Nordic. In 2025, 96% of retired packs were recycled.

Service fleet

At the end of 2025, 62% of our service vans were electric. We aim for a fully electric van fleet by 2027.

Mode shift

In our 2025 rider survey, 27% of respondents said their last Veloria trip replaced a car trip.
